

Both Sides Headphone Audio

Purpose

To enable sound in both the left and right ear. Original configuration only give sound on right ear.

Parts

Small wire
Soldering iron
Solder

Procedure:

1. Remove the audio input/output board from the uBITX.
2. Prepare a small wire approximately $\frac{3}{4}$ inch long, and trim less than $\frac{1}{8}$ inch insulation from each end.
3. Solder the jumper across the tip and ring pins of the middle socket as shown in the picture. Make sure there is no exposed wire beyond the soldered pin, and that no uninsulated wire is touching the ground plane on the board.

Result:
